Work authorisation: Employment Pass required

Summary

Backend-focused software engineering intern with a mechanical engineering background, building Java and Spring Boot services with an emphasis on testing and measurable performance

Education

Graduate Diploma in Systems Analysis (Software Engineering), Example Institute of Systems Science Aug 2025 - Jan 2027

Relevant courses: Object-Oriented Design, Web Application Development, Software Testing

Master of Engineering (Mechanical Engineering), Example Technological University Aug 2019 - Jun 2021

Grade: 4.3 / 5.0

Experience

Software Engineering Intern, Example Fintech Pte Ltd, Singapore May 2026 - Present

- Reduced p95 latency of the payment status API by 35% by adding a Redis cache in front of the reconciliation query
- Built REST endpoints for merchant refund requests with Spring Boot and PostgreSQL, covered by 40 integration tests using Testcontainers
- Automated the nightly settlement report with a GitHub Actions workflow, saving the operations team about 3 hours a week

Mechanical Design Engineer, Acme Precision Engineering Pte Ltd, Singapore Jul 2021 - Dec 2024

- Wrote Python scripts to batch-process finite element simulation results, cutting post-processing time from 2 days to 3 hours per design iteration
- Analysed vibration test data from 12 prototype units to identify a bracket resonance, leading to a redesign that passed qualification

Projects

Hawker Queue Estimator, Team lead Aug 2025 - Nov 2025

- Led a team of 4 to build a React and Spring Boot app that estimates hawker-stall queue times from crowd-sourced reports
- Deployed the service on AWS with Docker and a CI pipeline, serving 300 users during a two-week pilot

Skills

Languages: Java, Python, TypeScript
Frameworks: Spring Boot, React
Databases: PostgreSQL, Redis
Cloud/DevOps: Docker, AWS, GitHub Actions
Tools: MATLAB
Domain: Finite element analysis
